Easy Access established in 2006, is the industry leader in providing a Cloud-based modular solution that automates the processes connected with AP Invoicing, and Vendor Payment. The modules can be implemented separately or together and are specifically designed for companies that create many Purchase Orders or process more than 1,000 invoices per month.

The AP Invoicing module eliminates the need to handle paper and provides "Touchless" processing of invoices taking them from an image straight into your ERP system.

The Vendor payment module is a portal that allows vendor self-service for payment information.

The Easy Access platform connects with virtually any ERP or accounting system.

Join the company that will automate your processes so one AP staff can process over **3,000 invoices a month** and eliminate 100% of paper connected with these processes.
